

Mateo Baranji

Split, Croatia 
baranjimateo@gmail.com 

Senior Backend Engineer with 13+ years of experience designing and delivering **cloud-native solutions**, with **5+ years of Python** and **4+ years of hands-on Azure experience**. Proven track record leading engineering teams, architecting scalable systems, and mentoring developers. Strong background in **Azure Cloud services, microservices, CI/CD, and distributed system architecture**. Skilled at transforming product roadmaps into actionable engineering plans and driving high-quality delivery.

Experience

09/2023 – 2/2026

Senior Full Stack / Backend Engineer / Globant – Madrid, Spain

- Designed and deployed **12+ Python microservices** on Azure, supporting **70K+ active users** and **150K peak API requests/day**, achieving **99.9% uptime**.
- Architected cloud-native applications using **Azure App Services, Azure Functions, and Azure Storage**, improving deployment scalability **+40%**.
- Led **4 junior engineers and 2 team leads**, mentoring on Python best practices, CI/CD pipelines, and cloud architecture.
- Conducted architecture and code reviews, reducing production defects by **-22%**.
- Built **real-time data pipelines** using Python and Azure Data Factory processing **2–5M records/day**, improving processing accuracy **+28%**.
- Integrated Azure DevOps pipelines with automated testing and deployment, reducing release time **-82%**.
- Worked directly with stakeholders to translate roadmap into engineering deliverables with **95% on-time delivery**.
- Implemented monitoring and logging using **Azure Monitor and Application Insights**, reducing mean time to detect incidents **from 40 → 12 minutes**.

07/2020 – 08/2023

DevOps / Full Stack Engineer / Capgemini– Paris, France

- Managed **10+ Python microservices** on Azure, achieving **99.9% SLA uptime** under high traffic.
- Automated provisioning using **Terraform and Azure Resource Manager**, reducing environment setup time **from 3 days → 2 hours**.
- Built CI/CD pipelines in **Azure DevOps**, deploying 200+ containerized workloads with **60% higher consistency**.
- Optimized Python data pipelines for performance, increasing throughput **+30%** and reducing memory footprint **-25%**.
- Designed secure authentication and role-based access control across **15+ client applications**.
- Mentored engineers on Python, cloud-native patterns, and scalable architecture.
- Coordinated delivery schedules and prioritized technical backlog for cloud migration projects.
- Conducted incident post-mortems, improving reliability and governance across teams.

07/2017 – 06/2020

Tech Lead / Full Stack Engineer / Endava – London, United Kingdom

- Led **6–10 engineers** on Python + Azure microservices for **100K+ users**, achieving high availability <250ms latency.
- Decomposed monolith into microservices on **Azure Kubernetes Service (AKS)**, increasing deployment independence **+70%**.
- Conducted architecture and code reviews, reducing production incidents **-25%**.
- Designed REST APIs handling **250K daily requests** with <250ms latency.
- Mentored team leads and junior engineers in cloud-native Python best practices.
- Introduced TDD and automated performance testing, improving engineering quality **+20%**.
- Worked with stakeholders to translate product roadmap into actionable engineering deliverables **95% on time**.
- Optimized Azure services cost by **-15%** through efficient scaling and resource planning.

10/2014 – 05/2017

Full Stack Engineer (Backend-Focused Systems) / Thoughtworks – Berlin, Germany

- Built Python backend services on **Azure App Services** handling **40K–60K daily requests**, improving throughput **+25%**.
- Optimized SQL Server and Python algorithms for **1M+ records**, reducing execution time **-30%**.
- Developed secure RBAC authentication across **3+ enterprise applications**, increasing compliance **+100%**.
- Integrated **5 external APIs** with Azure Logic Apps, ensuring **99.9% data consistency**.
- Delivered Angular frontend modules integrated with backend services, reducing delivery cycles **-20%**.
- Mentored junior engineers on Python coding and Azure architecture.
- Implemented monitoring and logging with **Azure Monitor**, reducing incident response time **-35%**.
- Participated in Agile sprints, improving sprint predictability **+15%**.

06/2013 – 08/2014

Junior Backend Developer / EPAM Systems – Prague, Czech Republic

- Developed REST APIs using Python and C#, supporting **10K+ daily requests** with <200ms response time.
- Optimized database queries and algorithms, improving DB performance **+20%**.
- Debugged and resolved **40+ production issues**, increasing stability **+15%**.
- Assisted CI/CD pipeline implementation, reducing deployment errors **-15%**.
- Integrated frontend Angular modules with backend Python/C# services.
- Applied clean code and secure coding practices for production modules.
- Participated in Agile sprints, completing **95% of tasks on time**.
- Contributed to performance-critical Python modules for production systems.

Skills

Languages: Python, C#, TypeScript, SQL

Cloud / Azure: Azure App Services, Azure Functions, AKS, Azure Storage, Azure Data Factory, Azure Monitor, Application Insights, Azure DevOps

Backend / Microservices: Cloud-native architecture, REST APIs, high-throughput pipelines

DevOps / CI/CD: Docker, Kubernetes, Terraform, Azure DevOps pipelines

Leadership: Team mentoring, code reviews, technical lead, delivery coordination

Practices: Test-driven development, performance optimization, secure coding, Agile

Education

MAY 2013

Master in Computer Engineering /University of Split, Split, Croatia
