

# Aleksandra Andrejic

## Lead PHP Engineer/ Backend & Full-Stack Tech Lead

Obrenovac, Serbia, [alexsto429@gmail.com](mailto:alexsto429@gmail.com)

### SUMMARY

Lead PHP Engineer with 10+ years of software engineering experience building scalable backend systems, SaaS platforms, APIs, and distributed applications. Strong expertise in PHP, Laravel, Symfony, PostgreSQL, MySQL, Redis, REST APIs, microservices, and event-driven architecture, complemented by Go, Python, Vue.js, React, Next.js, and TypeScript. Experienced in cloud-native development, high-load systems, third-party integrations, Docker/Kubernetes, CI/CD, system architecture, code reviews, and engineering leadership.

### EXPERIENCE

---

#### Lead PHP / Full-Stack Engineer

Engenious

*January 2025 - Present*

- Led architecture and development of scalable SaaS and enterprise applications using PHP, Laravel, PostgreSQL, Redis, Vue.js, and TypeScript.
- Designed modular backend architectures using Laravel, REST APIs, service layers, queues, background jobs, and event-driven patterns.
- Developed high-performance APIs supporting customer-facing applications, internal platforms, and third-party integrations.
- Designed microservices and supporting backend services using PHP with complementary Go and Python services for specialized workloads.
- Implemented asynchronous processing using Laravel Queues, Redis, RabbitMQ, and Kafka.
- Built frontend functionality using Vue.js, Next.js, React, TypeScript, HTML, and CSS.
- Designed relational database models and optimized PostgreSQL/MySQL queries, indexes, transactions, and caching.
- Implemented authentication and authorization using OAuth2, JWT, RBAC, and secure API patterns.
- Integrated external payment, authentication, analytics, notification, and enterprise APIs.
- Designed cloud-native deployment environments using Docker, Kubernetes, Terraform, AWS, Azure, and GCP.
- Improved application observability using Prometheus, Grafana, ELK, Sentry, and structured logging.
- Led architecture discussions, code reviews, technical planning, performance optimization, and mentoring.

#### Tech Lead / Senior PHP Backend Engineer

Profinda

*May 2023 – November 2024*

- Led backend development of enterprise SaaS applications using PHP, Laravel, Symfony, PostgreSQL, MySQL, Redis, and REST APIs.
- Designed scalable microservices and modular backend architectures following SOLID and clean architecture principles.
- Developed RESTful APIs and integration services connecting frontend applications, enterprise systems, and external providers.

- Implemented background jobs, queues, scheduled processing, and event-driven workflows.
- Built high-throughput services using PHP alongside Go/Python components where appropriate for specialized processing.
- Developed frontend functionality using Vue.js, React, Next.js, and TypeScript.
- Implemented resilient integrations with retries, timeouts, idempotency, validation, and structured error handling.
- Optimized SQL queries, indexes, Redis caching, and backend application performance.
- Implemented secure authentication and authorization using OAuth2, JWT, and RBAC.
- Automated application deployment using Docker, Kubernetes, Terraform, and CI/CD.
- Collaborated with product, QA, DevOps, frontend, and backend engineers on end-to-end feature delivery.
- Led code reviews, technical design, architecture improvements, and mentoring.

### **Senior PHP/ Full –Stack Engineer**

Cadasta

*July 2019 – January 2023*

- Developed scalable web platforms using PHP, Laravel, Symfony, Vue.js, React, TypeScript, PostgreSQL, and Redis.
- Built production-grade REST APIs and backend services supporting complex enterprise workflows.
- Designed reusable service, repository, domain, and API layers for maintainable backend applications.
- Developed customer-facing interfaces, administrative applications, dashboards, and internal tools using Vue.js and React.
- Integrated backend services with external APIs, payment systems, authentication providers, and enterprise platforms.
- Built asynchronous processing using queues and background workers for data-intensive operations.
- Developed complementary Python and Go services for automation, data processing, and backend workloads.
- Designed and optimized PostgreSQL/MySQL schemas, SQL queries, indexes, and caching.
- Implemented automated unit, integration, and API testing.
- Containerized services using Docker and supported cloud deployments and CI/CD.
- Participated in system design, architecture reviews, code reviews, and production troubleshooting.

### **PHP Backend /Full-Stack Engineer**

Netlandish

*August 2016 – March 2019*

- Developed backend applications using PHP, Laravel/Symfony, MySQL, PostgreSQL, Redis, and REST APIs.
- Built secure APIs supporting web applications and third-party integrations.
- Implemented business logic, database access, authentication, authorization, and role-based permissions.
- Developed frontend functionality using JavaScript and Vue.js for customer-facing and administrative applications.
- Integrated external APIs, payment providers, messaging services, and enterprise systems.
- Implemented queues, scheduled jobs, and asynchronous background processing.
- Optimized database queries, indexes, caching, and backend performance.
- Developed supporting Python automation and data-processing scripts.

- Supported Linux and Docker-based application environments.
- Participated in testing, debugging, code reviews, architecture discussions, and production support.

## EDUCATION

---

### Belgrade of University

Bachelor of computer science

2012 – 2016

## SKILLS

---

### PHP & Backend

PHP, PHP 8+, Laravel, Symfony, Composer, Laravel Eloquent, Laravel Queues, Artisan, REST APIs, MVC, ORM, Background Jobs, API Development

### Programming Languages

PHP, Go (Golang), Python, TypeScript, JavaScript, SQL, Bash

### Golang

Go, REST Services, Microservices, Goroutines, Channels, Concurrent Processing, Backend Services

### Python

Python, FastAPI, Django, Flask, Celery, Async Processing, Automation, Data Processing

### Frontend

Vue.js, Vue 3, React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Responsive Design, Component Architecture, SSR, SSG

### Databases

PostgreSQL, MySQL, Redis, MongoDB, ClickHouse, SQL, Database Design, Query Optimization, Indexing, Transactions, Caching

### Messaging & Distributed Systems

Kafka, RabbitMQ, Redis Queues, Laravel Queues, Event-Driven Architecture, Message Queues, Async Processing, Distributed Systems

### Architecture

Microservices, Clean Architecture, SOLID, Design Patterns, RESTful Architecture, Distributed Systems, High-Availability Systems, Scalable Backend Architecture

### Cloud & DevOps

AWS, Azure, GCP, Docker, Kubernetes, Terraform, GitLab CI/CD, GitHub Actions, Jenkins, Ansible, Linux, Nginx, CI/CD, Infrastructure as Code

### Security

OAuth2, JWT, OIDC, RBAC, OWASP, Secure API Design, Authentication & Authorization

### Testing & Quality

PHPUnit, Pest, Unit Testing, Integration Testing, API Testing, Postman, Code Review, Static Analysis, Performance Testing

### AI & Data

LLM Integration, AI Agents, RAG, OpenAI API, LangChain, LangGraph, Vector Search, AI-Assisted Development, Python Data Processin
