

Goran Pavlovic

Zagreb, Croatia | pavloviche525@outlook.com

Profile

Frontend Platform Engineer with 10+ years of experience designing and building scalable frontend platforms, workflow automation products, and high-performance SaaS applications. Specialized in TypeScript, Vue 3, Nuxt, React, frontend architecture, platform primitives, and developer experience (DX). Experienced in building architecture-heavy frontend systems including visual workflow builders, canvas-based editors, node-based interfaces, collaborative applications, reusable UI primitives, plugin-based architectures, and real-time multiplayer experiences. Strong background in WebSocket communication, CRDT-based collaboration concepts, real-time state synchronization, frontend performance profiling, rendering optimization, and scalable frontend infrastructure. Proven ability to lead frontend platform initiatives, define technical architecture through RFCs, improve developer workflows, and deliver production-grade platforms for distributed engineering teams.

Experience

LEAD FRONTEND ENGINEER / SOFTWARE ARCHITECT | ARS FUTURA | MAY 2023 – FEBURARY 2026

- Led frontend platform architecture for complex SaaS applications with focus on scalability, maintainability, and developer experience.
- Designed reusable frontend platform primitives, shared UI components, and scalable component architecture patterns.
- Built advanced interactive user interfaces including workflow-style applications, dynamic editors, and complex data-driven dashboards.
- Developed real-time frontend experiences using WebSockets, event-driven UI updates, and synchronized application state patterns.
- Designed workflow automation interfaces with node-based editors, canvas interactions, and graph-based user experiences.
- Built frontend platform primitives supporting reusable workflows, extensible modules, and plugin-style feature architecture.
- Implemented real-time collaboration patterns using WebSockets, synchronized application state, and CRDT-inspired approaches.
- Designed scalable frontend contracts between platform components, shared libraries, and product teams.
- Improved frontend developer experience through reusable tooling, architecture standards, and documentation.
- Participated in technical RFC discussions covering frontend architecture, scalability, and long-term platform decisions.
- Optimized complex UI rendering using browser profiling tools, performance analysis, and runtime optimization techniques.
- Developed extensible frontend modules supporting plugin-based architecture and dynamic feature integration.

- Applied collaborative editing concepts and CRDT-inspired synchronization approaches for real-time application experiences.
- Established frontend engineering standards including architecture guidelines, reusable patterns, and code quality practices.
- Introduced AI-assisted development workflows using Cursor, GitHub Copilot, and ChatGPT to improve engineering productivity.
- Improved frontend performance and rendering efficiency by approximately 30%.

SENIOR FRONTEND ENGINEER (SAAS PLATFORMS)| Q AGENCY | JUNE 2020 – MAY 2023

- Developed scalable SaaS frontend platforms using TypeScript, React, Next.js, and modern frontend architecture patterns.
- Built complex enterprise user interfaces with reusable components, modular architecture, and maintainable frontend systems.
- Designed real-time UI features using WebSockets and event-driven communication patterns.
- Implemented interactive applications requiring dynamic rendering, synchronized state management, and high-performance user experiences.
- Developed frontend modules following component-driven design principles and scalable UI architecture.
- Integrated REST and GraphQL APIs into complex frontend workflows.
- Improved application performance through caching strategies, lazy loading, code splitting, and rendering optimization.
- Collaborated with backend and product teams on architecture decisions and technical improvements.
- Contributed to frontend platform improvements, shared components, and developer productivity initiatives.

FRONTEND DEVELOPER / SOFTWARE ENGINEER| INFINUM | MAY 2016 – JUNE 2020

- Developed modern web applications with strong focus on frontend UX and performance
- Built dashboards and analytics systems using React, Vue (early exposure), and Angular
- Implemented real-time UI updates using WebSockets
- Worked on SSR concepts and scalable frontend architecture design
- Contributed to UI performance optimization and component-driven design systems

FRONTEND DEVELOPER| KODIUS | AUGUST 2014 – MAY 2016

- Built web applications with strong focus on UI/UX and frontend performance
- Developed dashboards and analytics interfaces using React, Angular, and early Vue exposure
- Implemented real-time UI systems using WebSockets
- Worked with SCSS and responsive component-based UI systems
- Contributed to frontend architecture decisions and SSR foundations
- Delivered production SaaS applications in Agile teams

Education

UNIVERSITY OF ZAGREB | OCTOBER 2010 –JULY 2014 | MASTER'S DEGREE –COMPUTER SCIENCE

Skills

FRONTEND PLATFORM ENGINEERING

- Vue 3, Nuxt 3/4, TypeScript, React, Next.js, JavaScript ES6+, Frontend Platform Architecture, Frontend Infrastructure, Reusable UI Primitives, Component Libraries, Design Systems, Plugin Architecture, Frontend Developer Experience (DX), Architecture Patterns

ADVANCED UI ENGINEERING

- Workflow Builders, Canvas-Based Applications, Node-Based Editors, Interactive Editors, Complex UI Systems, Data Visualization, D3.js, Cytoscape.js, Chart.js, Rendering Optimization, Browser Performance Profiling, Core Web Vitals, Responsive Design, Accessibility

REAL-TIME COLLABORATION SYSTEMS

- WebSockets, Real-Time Communication, Event-Driven UI Architecture, Collaborative Editing Systems, CRDT Concepts, Multiplayer Application Architecture, Real-Time State Synchronization, Live Data Updates, Workflow Automation Platforms

STATE MANAGEMENT

- Vue Composition API, Pinia Architecture, Redux, Zustand, Reactive State Management, Distributed Frontend State Patterns

BACKEND & PLATFORM INTEGRATION

- Node.js, REST APIs, GraphQL, API Integration, Microservices Architecture, Backend Communication Patterns

CLOUD & DEVOPS

- Docker, Kubernetes, AWS, CI/CD Pipelines, GitHub Actions, Azure DevOps, Cloud Deployments

TESTING & QUALITY

- Jest, Cypress, Playwright, Unit Testing, Integration Testing, E2E Testing, Code Reviews, Frontend Quality Standards

AI DEVELOPMENT

- Cursor, GitHub Copilot, ChatGPT-Assisted Development, AI-Augmented Engineering Workflows

LEADERSHIP

- Technical Ownership, Frontend Architecture Decisions, Mentoring Engineers, RFC-Based Design Discussions, Agile/Scrum, Cross-Team Collaboration
